OBSERVATION INFORMATION

Species	Date (s) Observed	Spawning	Rearing	Migration	Anadromous
Coho juveniles	7/28/00		10		Yes

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as any other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

COMMENTS: On July 28, 2000, the above tributary, located at T.76S., R.82E., Section 22, which flows northeast into cataloged stream 103-40-10170, was inspected using an electrofisher in order to determine the extent of anadromous fish habitat. It was determined that, based on the finding of juvenile coho salmon, the tributary should be added to the catalog for a distance of 440 meters.

Action: Add the 440 meter tributary to cataloged stream 103-40-10170

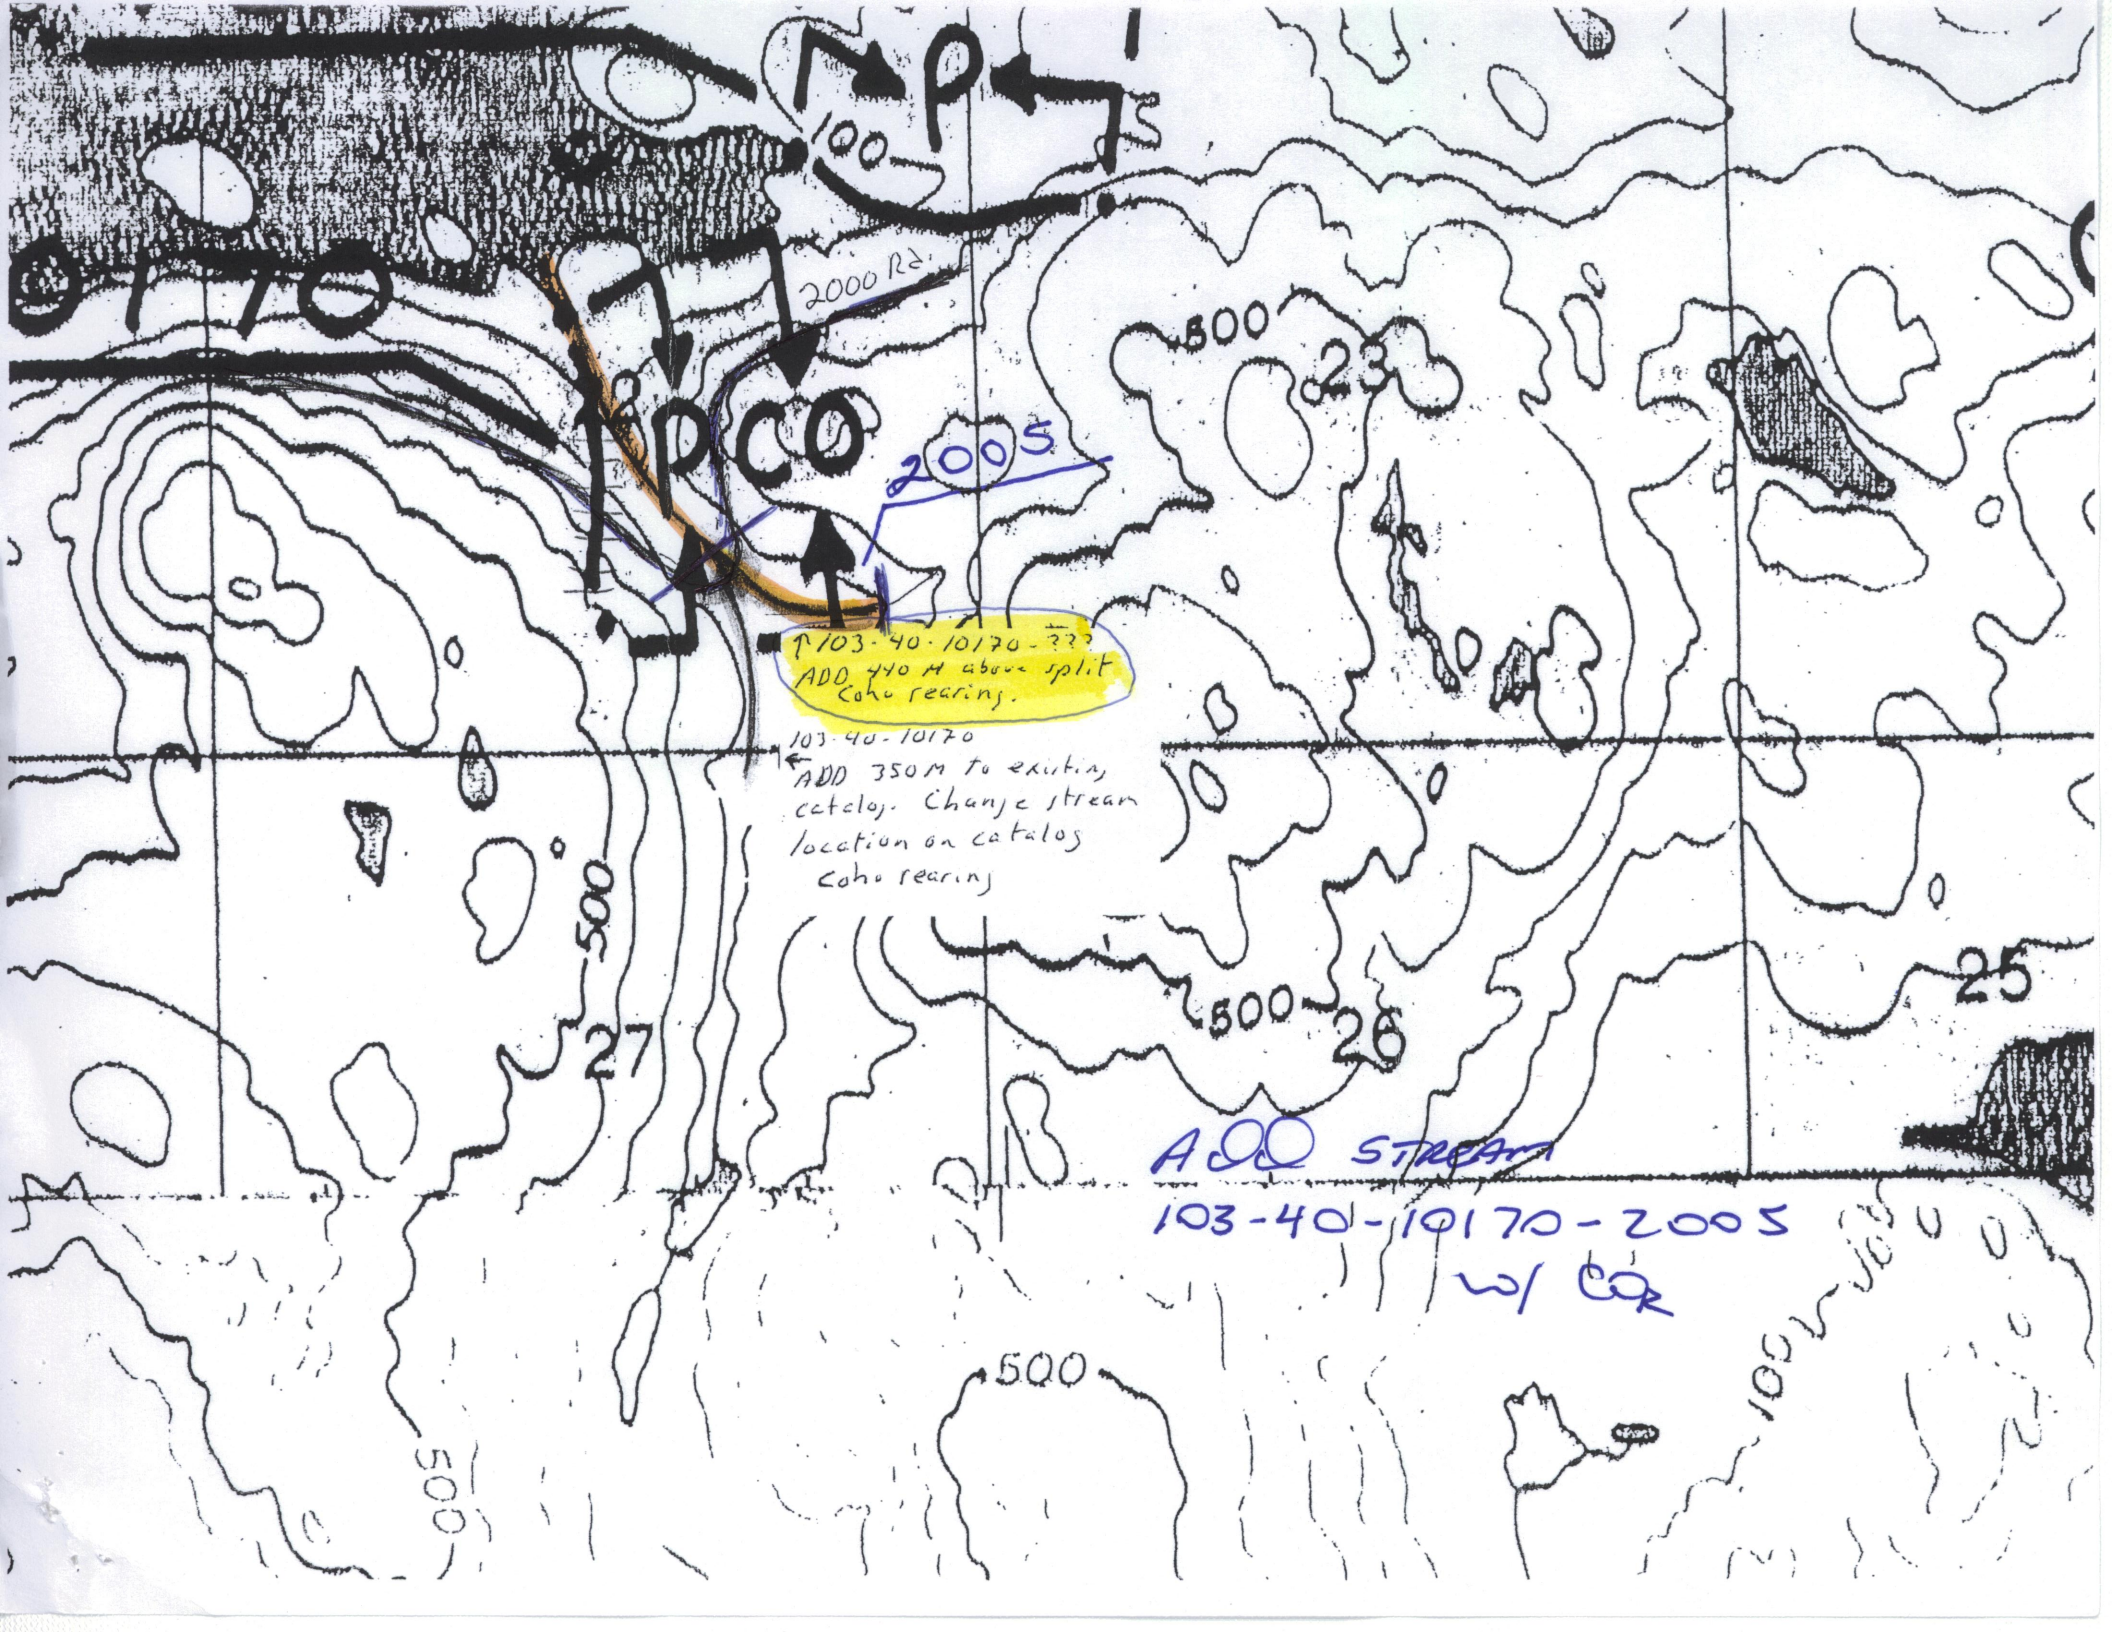

Name of Observers (please Print) Mark J. Minnillo
